

IT Asset Disposal

IT Asset Disposal provides your IT service provider with a secure and environmentally-friendly disposal process for your decommissioned computer workstations that have reached the end of their useful life.

Electronic waste represents
2% of America's
trash in landfills,
but it equals more than
two thirds
of overall toxic waste.

Larmer, Brook. "E-Waste Offers an Economic Opportunity as Well as Toxicity." NY Times, 5 July 2018

Protect your data

with 3rd party verification

The National Institute of Standards and Technology (NIST) has been given the responsibility by the US Department of Commerce for developing information security standards and guidelines, including setting minimum requirements for US federal information systems. Have the assurance that your data has been securely erased to **NIST 800-88 standards** – your service provider can provide you with a certification of data destruction once the disposal process is complete.

A greener way

where one computer equals one tree

Teaming up with leading tree planting organizations, the ITAD program is in partnership with **veritree**. For each computer workstation – desktop, thin client, or laptop – that goes through our disposition process, a tree will be planted in a US forest affected by drought and wildfire.

A cleaner disposition process

for your end-of-life computers

We ask that you include the power cord and/or AC adapter that came with the computer workstation. If any components can be reused, our recycling partner will make it happen. Use any old box available for shipping. Diverting materials from landfill is just the start.
